Parallel and Perpendicular Lines

Big Ideas
- Identify angle relationships that occur with parallel lines and a transversal, and identify and prove lines parallel from given angle relationships.
- Use slope to analyze a line and to write its equation.
- Find the distance between a point and a line and between two parallel lines.

Key Vocabulary
parallel lines (p. 142)
transversal (p. 143)

Real-World Link
Architecture The East Building of the National Gallery of Art in Washington, D.C., designed by architect I.M. Pei, has an H-shaped façade. Viewed from above, the building appears to be made of interlocking diamonds. This design creates many parallel lines.

Foldables
Parallel and Perpendicular Lines Make this Foldable to help you organize your notes. Begin with one sheet of $8\frac{1}{2} \times 11$" paper.

1. **Fold** in half matching the short sides.

2. **Unfold** and fold the long side up 2 inches to form a pocket.

3. **Staple** or glue the outer edges to complete the pocket.

4. **Label** each side as shown. Use index cards to record examples.
Option 1

Take the Quick Check below. Refer to the Quick Review for help.

**Name all of the lines that contain the given point. (Lesson 1-1)**

1. Q
2. R
3. S
4. T

**Name all angles congruent to the given angle. (Lessons 1-5)**

5. \( \angle 2 \)
6. \( \angle 5 \)
7. \( \angle 3 \)
8. \( \angle 8 \)

**EXAMPLE 1**

Name all of the lines that contain the point \( C \).

Point \( C \) is the intersection point of lines \( \overrightarrow{AD} \) and \( \overrightarrow{BC} \).

**EXAMPLE 2**

Name all angles congruent to \( \angle 5 \).

Look at the congruence marks. From the figure, \( \angle 1 \), \( \angle 3 \), and \( \angle 7 \) are each congruent to \( \angle 5 \).

**EXAMPLE 3**

Find the value of \( y \) in \( 2x - y = 4 \) if \( x = -4 \).

\[
2x - y = 4 \\
-y = -2x + 4 \\
y = 2x - 4 \\
y = 2(-4) - 4 \\
y = -8 - 4 \\
y = -12
\]

**MOVIES** A local movie theater is running a promotion in which a large popcorn costs $2 with the purchase of two adult tickets. If Mr. and Mrs. Elian spent $19 at the movie theater, write an equation to represent the cost and solve for the cost of one adult ticket. (Prerequisite Skill)
### Main Ideas
- Identify the relationships between two lines or two planes.
- Name angles formed by a pair of lines and a transversal.

### New Vocabulary
- parallel lines
- parallel planes
- skew lines
- transversal
- consecutive interior angles
- alternate exterior angles
- alternate interior angles
- corresponding angles

### Relationships Between Lines and Planes
Lines \(\ell\) and \(m\) are coplanar because they lie in the same plane. If the lines were extended indefinitely, they would not intersect. Coplanar lines that do not intersect are called parallel lines. Segments and rays contained within parallel lines are also parallel.

The symbol \(\parallel\) means is parallel to. Arrows are used in diagrams to indicate that lines are parallel. In the figure, the arrows indicate that \(\overline{PQ}\) is parallel to \(\overline{RS}\).

Similarly, two planes can intersect or be parallel. In the photograph above, the front faces of the building are contained in parallel planes. The walls and the floor of each level lie in intersecting planes.

### GEOMETRY LAB

**Draw a Rectangular Prism**

A rectangular prism can be drawn using parallel lines and parallel planes.

- **Step 1** Draw two parallel planes to represent the top and bottom.
- **Step 2** Draw the edges. Make any hidden edges dashed.
- **Step 3** Label the vertices.

### ANALYZE

1. Identify the parallel planes in the figure.
2. Name the planes that intersect plane \(ABC\) and name their intersections.
3. Identify all segments parallel to \(\overline{BF}\).
Notice that in the Geometry Lab, $\overline{AE}$ and $\overline{GF}$ do not intersect. These segments are not parallel since they do not lie in the same plane. Lines that do not intersect and are not coplanar are called skew lines. Segments and rays contained in skew lines are also skew.

**EXAMPLE**

**Identify Relationships**

1. Name all segments that are parallel to $\overline{EF}$.

2. Name all segments that intersect $\overline{CH}$.
   - $\overline{BC}$, $\overline{CD}$, $\overline{CE}$, $\overline{EH}$, and $\overline{GH}$

3. Name all segments that are skew to $\overline{BG}$.
   - $\overline{AD}$, $\overline{CD}$, $\overline{CE}$, $\overline{EF}$, and $\overline{EH}$

**Angle Relationships** In the drawing of the railroad crossing, notice that the tracks, represented by line $t$, intersect the sides of the road, represented by lines $m$ and $n$. A line that intersects two or more lines in a plane at different points is called a transversal.

**Transversals** Some of the runways at O'Hare International Airport are shown below. Identify the sets of lines to which each given line is a transversal.

1. **line $q$**
   - If the lines are extended, line $q$ intersects lines $\ell$, $n$, $p$, and $r$.

2. **line $m$**
   - lines $\ell$, $n$, $p$, and $r$

3. **line $n$**
   - lines $\ell$, $m$, $p$, and $q$

2. **line $r$**

In the drawing of the railroad crossing above, notice that line $t$ forms eight angles with lines $m$ and $n$. These angles are given special names, as are specific pairings of these angles.
**Example 1** (p. 143)

For Exercises 1–3, refer to the figure at the right.

1. Name all planes that intersect plane $ADM$.
2. Name all segments that are parallel to $CD$.
3. Name all segments that intersect $KL$.

**Example 2** (p. 143)

Identify the pairs of lines to which each given line is a transversal.

4. $p$
5. $r$
6. $q$
7. $t$

**Example 3** (p. 144)

Identify each pair of angles as *alternate interior*, *alternate exterior*, *corresponding*, or *consecutive interior angles*.

8. $\angle 7$ and $\angle 10$
9. $\angle 1$ and $\angle 5$
10. $\angle 4$ and $\angle 6$
11. $\angle 8$ and $\angle 1$

---

**Study Tip**

*Same Side Interior Angles*

Consecutive interior angles are also called *same side interior angles*.

---

**KEY CONCEPT**

**Transversals and Angles**

<table>
<thead>
<tr>

---

**EXAMPLE** Identify Angle Relationships

Refer to the figure below. Identify each pair of angles as *alternate interior*, *alternate exterior*, *corresponding*, or *consecutive interior angles*.

a. $\angle 1$ and $\angle 7$
   alternate exterior
b. $\angle 2$ and $\angle 10$
   corresponding
c. $\angle 8$ and $\angle 9$
   consecutive interior
d. $\angle 3$ and $\angle 12$
   corresponding
e. $\angle 4$ and $\angle 10$
   alternate interior
f. $\angle 6$ and $\angle 11$
   alternate exterior

**Personal Tutor** at geometryonline.com
For Exercises 12–19, refer to the figure at the right.

12. Name all segments parallel to \( AB \).
13. Name all planes intersecting plane \( BCR \).
14. Name all segments parallel to \( TW \).
15. Name all segments skew to \( DE \).
16. Name all planes intersecting plane \( EDS \).
17. Name all segments skew to \( AP \).
18. Name all segments parallel to \( DC \).
19. Name all segments parallel to \( DS \).

Identify the pairs of lines to which each given line is a transversal.

20. \( a \)  
21. \( b \)  
22. \( c \)  
23. \( r \)

Identify each pair of angles as alternate interior, alternate exterior, corresponding, or consecutive interior angles.

24. \( \angle 2 \) and \( \angle 10 \)  
25. \( \angle 1 \) and \( \angle 11 \)  
26. \( \angle 5 \) and \( \angle 3 \)  
27. \( \angle 6 \) and \( \angle 14 \)  
28. \( \angle 5 \) and \( \angle 15 \)  
29. \( \angle 11 \) and \( \angle 13 \)  
30. \( \angle 8 \) and \( \angle 3 \)  
31. \( \angle 9 \) and \( \angle 4 \)  
32. \( \angle 6 \) and \( \angle 16 \)  
33. \( \angle 7 \) and \( \angle 3 \)  
34. \( \angle 10 \) and \( \angle 13 \)  
35. \( \angle 12 \) and \( \angle 14 \)

36. **AVIATION**  Airplanes heading east are assigned an altitude level that is an odd number of thousands of feet. Airplanes heading west are assigned an altitude level that is an even number of thousands of feet. If one airplane is flying northwest at 34,000 feet and another airplane is flying east at 25,000 feet, describe the type of lines formed by the paths of the airplanes. Explain your reasoning.

**MONUMENTS**  For Exercises 37–40, refer to the photograph of the Lincoln Memorial.

37. Describe a pair of parallel lines found on the Lincoln Memorial.
38. Find an example of parallel planes.
39. Locate a pair of skew lines.
40. Identify a transversal passing through a pair of lines.
Name the transversal that forms each pair of angles. Then identify the special name for the angle pair.

41. \( \angle 3 \) and \( \angle 10 \)
42. \( \angle 2 \) and \( \angle 12 \)
43. \( \angle 8 \) and \( \angle 14 \)
44. \( \angle 9 \) and \( \angle 16 \)

**STRUCTURES** For Exercises 45-47, refer to the drawing of the gazebo at the right.

45. Name all labeled segments parallel to \( \overrightarrow{BF} \).
46. Name all labeled segments skew to \( \overrightarrow{AC} \).
47. Are any of the planes on the gazebo parallel to plane \( \overrightarrow{ADE} \)? Explain.

48. **RESEARCH** The word *parallel* describes computer processes that occur simultaneously, or devices, such as printers, that receive more than one bit of data at a time. Find two other examples for uses of the word *parallel* in other subject areas such as history, music, or sports.

49. **OPEN ENDED** Draw a solid figure with parallel planes. Describe which parts of the figure are parallel.

50. **FIND THE ERROR** Juanita and Eric are naming alternate interior angles in the figure at the right. One of the angles must be \( \angle 4 \). Who is correct? Explain your reasoning.

51. **CHALLENGE** Suppose there is a line \( \ell \) and a point \( P \) not on the line.
   51. In space, how many lines can be drawn through \( P \) that do not intersect \( \ell \)?
   52. In space, how many lines can be drawn through \( P \) that are parallel to \( \ell \)?

53. **Writing in Math** Use the information about architecture on page 142 to explain how parallel lines and planes are used in architecture. Include a description of where you might find examples of parallel lines and parallel planes, and skew lines and nonparallel planes.
54. Which of the following angle pairs are alternate exterior angles?

A \( \angle 1 \) and \( \angle 5 \)
B \( \angle 2 \) and \( \angle 10 \)
C \( \angle 2 \) and \( \angle 6 \)
D \( \angle 5 \) and \( \angle 9 \)

55. **REVIEW** Which coordinate points represent the \( x \)- and \( y \)-intercepts of the graph shown below?

- F \((-5.6, 0), (0, 4)\)
- G \((5.6, 0), (4, 0)\)
- H \((6, 0), (0, 4)\)
- J \((0, 4), (0, 6)\)

---

56. **PROOF** Write a two-column proof. (Lesson 2-8)

**Given:** \( m\angle ABC = m\angle DFE, m\angle 1 = m\angle 4 \)

**Prove:** \( m\angle 2 = m\angle 3 \)

57. **PROOF** Write a paragraph proof. (Lesson 2-7)

**Given:** \( \overline{PQ} \cong \overline{ZY}, \overline{QR} \cong \overline{XY} \)

**Prove:** \( \overline{PR} \cong \overline{XZ} \)

---

Determine whether a valid conclusion can be reached from the two true statements using the Law of Detachment or the Law of Syllogism. If a valid conclusion is possible, state it and the law that is used. If a valid conclusion does not follow, write no conclusion. (Lesson 2-4)

58. (1) If two angles are vertical, then they do not form a linear pair.

   (2) If two angles form a linear pair, then they are not congruent.

59. (1) If an angle is acute, then its measure is less than 90.

   (2) \( \angle EFG \) is acute.

---

**PREREQUISITE SKILL** State the measures of linear pairs of angles in each figure. (Lesson 2-6)

60.

61.

62.
You can use The Geometer’s Sketchpad® to investigate the measures of angles formed by two parallel lines and a transversal.

**ACTIVITY**

**Step 1** Draw parallel lines.
- Construct points \( A \) and \( B \).
- Construct a line through the points.
- Place point \( C \) so that it does not lie on \( \overrightarrow{AB} \).
- Construct a line through \( C \) parallel to \( \overrightarrow{AB} \).
- Place point \( D \) on this line.

**Step 2** Construct a transversal.
- Place point \( E \) on \( \overrightarrow{AB} \) and point \( F \) on \( \overrightarrow{CD} \).
- Construct a line through points \( E \) and \( F \).
- Place points \( G \) and \( H \) on \( \overrightarrow{EF} \).

**Step 3** Measure angles.
- Measure each angle.

**Analyze the Results**

1. List pairs of angles by the special names you learned in Lesson 3-1. Which pairs have the same measure?
2. What is the relationship between consecutive interior angles?
3. Make a conjecture about the following pairs of angles formed by two parallel lines and a transversal. Write your conjecture in if-then form.
   a. corresponding angles
   b. alternate interior angles
   c. alternate exterior angles
   d. consecutive interior angles
4. Rotate the transversal. Are the angles with equal measures in the same relative location as the angles with equal measures in your original drawing?
5. Test your conjectures by rotating the transversal and analyzing the angles.
6. Rotate the transversal so that the measure of at least one angle is 90.
   a. What do you notice about the measures of the other angles?
   b. Make a conjecture about a transversal that is perpendicular to one of two parallel lines.
**Main Ideas**

- Use the properties of parallel lines to determine congruent angles.
- Use algebra to find angle measures.

**Parallel Lines and Angle Pairs** In the figure above, \( \angle 1 \) and \( \angle 2 \) are corresponding angles. When the two lines are parallel, there is a special relationship between these pairs of angles.

**POSTULATE 3.1**

*Corresponding Angles Postulate*

If two parallel lines are cut by a transversal, then each pair of corresponding angles is congruent.

**Examples:** \( \angle 1 \equiv \angle 5 \), \( \angle 2 \equiv \angle 6 \), \( \angle 3 \equiv \angle 7 \), \( \angle 4 \equiv \angle 8 \)

**EXAMPLE**

**Determine Angle Measures**

**In the figure,** \( m\angle 3 = 133 \). **Find** \( m\angle 5 \).

\[
\begin{align*}
\angle 3 & \equiv \angle 7 & \text{Corresponding Angles Postulate} \\
\angle 7 & \equiv \angle 5 & \text{Vertical Angles Theorem} \\
\angle 3 & \equiv \angle 5 & \text{Transitive Property} \\
133 & = m\angle 5 & \text{Definition of congruent angles} \\
133 & = m\angle 5 & \text{Substitution}
\end{align*}
\]

**CHECK Your Progress**

1. In the figure, \( m\angle 8 = 47 \). **Find** \( m\angle 4 \).

In Example 1, alternate interior angles 3 and 5 are congruent. This suggests another special relationship between angles formed by two parallel lines and a transversal. Other relationships are summarized in Theorems 3.1, 3.2, and 3.3.
You will prove Theorems 3.2 and 3.3 in Exercises 26 and 23, respectively.

**Theorem 3.1**

**Given:** \( a \parallel b; \ p \) is a transversal of \( a \) and \( b \).

**Prove:** \( \angle 2 \equiv \angle 7, \ \angle 3 \equiv \angle 6 \)

**Paragraph Proof:** We are given that \( a \parallel b \) with a transversal \( p \). By the Corresponding Angles Postulate, \( \angle 2 \equiv \angle 4 \) and \( \angle 8 \equiv \angle 6 \). Also, \( \angle 4 \equiv \angle 7 \) and \( \angle 3 \equiv \angle 8 \) because vertical angles are congruent. Therefore, \( \angle 2 \equiv \angle 7 \) and \( \angle 3 \equiv \angle 6 \) since congruence of angles is transitive.

A special relationship occurs when the transversal is a perpendicular line.

**Theorem 3.4**

**In a plane, if a line is perpendicular to one of two parallel lines, then it is perpendicular to the other.**

**Proof**

**Given:** \( p \parallel q, t \perp p \)

**Prove:** \( t \perp q \)

**Proof:**

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>

</tbody>
</table>
Read the Test Item

You need to find \( m \angle GHI \).

Solve the Test Item

Draw \( \overleftrightarrow{JK} \) through \( H \) parallel to \( \overline{AB} \) and \( \overline{CD} \).

\[
\angle EHK \cong \angle AEH \quad \text{Alternate Interior Angles Theorem}
\]

\[ m \angle EHK = m \angle AEH \quad \text{Definition of congruent angles} \]

\[ m \angle EHK = 40 \quad \text{Substitution} \]

\[ \angle FHK \cong \angle CFH \quad \text{Alternate Interior Angles Theorem} \]

\[ m \angle FHK = m \angle CFH \quad \text{Definition of congruent angles} \]

\[ m \angle FHK = 70 \quad \text{Substitution} \]

\[ m \angle GHI = m \angle EHK + m \angle FHK \quad \text{Angle Addition Postulate} \]

\[ = 40 + 70 \] or \[ 110 \]

Thus, the answer is choice B.

2. What is \( m \angle 1 \)?

\[ \text{F} \ 45^\circ \quad \text{H} \ 90^\circ \]

\[ \text{G} \ 65^\circ \quad \text{J} \ 135^\circ \]

Algebra and Angle Measures Angles formed by two parallel lines and a transversal can be used to find unknown values.

EXAMPLE Find Values of Variables

ALGEBRA If \( m \angle 1 = 3x + 40 \) and \( m \angle 3 = 2x + 70 \), find \( x \).

Since \( \overline{FG} \parallel \overline{EH} \), \( \angle 1 \cong \angle 3 \) by the Corresponding Angles Postulate.

\[ m \angle 1 = m \angle 3 \quad \text{Definition of congruent angles} \]

\[ 3x + 40 = 2x + 70 \quad \text{Substitution} \]

\[ x = 30 \quad \text{Subtract 2x and 40 from each side.} \]

3. Refer to the figure. If \( m \angle 2 = 4x + 7 \) and \( m \angle 3 = 5x - 13 \), find \( m \angle 3 \).
Example 1  
(p. 149)  
In the figure, $m\angle 3 = 110$ and $m\angle 12 = 55$. Find the measure of each angle.  
1. $\angle 1$  
2. $\angle 6$  
3. $\angle 2$

Example 2  
(p. 151)  
4. **STANDARDIZED TEST PRACTICE** What is $m\angle 1$?  
   A  $5^\circ$  
   B  $31^\circ$  
   C  $36^\circ$  
   D  $67^\circ$  

Example 3  
(p. 151)  
Find $x$ and $y$ in each figure.  
5.  
6.  

In the figure, $m\angle 3 = 43$. Find the measure of each angle.  
7. $\angle 2$  
8. $\angle 7$  
9. $\angle 10$  
10. $\angle 11$  
11. $\angle 13$  
12. $\angle 16$

In the figure, $m\angle 1 = 50$ and $m\angle 3 = 60$. Find the measure of each angle.  
13. $\angle 4$  
14. $\angle 5$  
15. $\angle 2$  
16. $\angle 6$  
17. $\angle 7$  
18. $\angle 8$

Find $x$ and $y$ in each figure.  
19.  
20.  

Find $m\angle 1$ in each figure.  
21.  
22.
23. **PROOF** Copy and complete the proof of Theorem 3.3.

**Given:** $\ell \parallel m$

**Prove:** $\angle 1 \cong \angle 8$

$\angle 2 \cong \angle 7$

**Proof:**

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. $\ell \parallel m$</td>
<td>1. ?</td>
</tr>
<tr>
<td>2. $\angle 1 \cong \angle 5, \angle 2 \cong \angle 6$</td>
<td>2. ?</td>
</tr>
<tr>
<td>3. $\angle 5 \cong \angle 8, \angle 6 \cong \angle 7$</td>
<td>3. ?</td>
</tr>
<tr>

</tbody>
</table>

24. **CARPENTRY** Anthony is building a picnic table for his patio. He cut one of the legs at an angle of 40°. At what angle should he cut the other end to ensure that the top of the table is parallel to the ground? Explain.

25. **CONSTRUCTION** Parallel drainage pipes are connected with a third pipe. The connector pipe makes a 65° angle with a pipe as shown. What is the measure of the angle it makes with the pipe on the other side of the road? Explain.

26. **PROOF** Write a two-column proof of Theorem 3.2.

Refer to the figure for Exercises 27 and 28.

27. Determine whether $\angle 1$ is always, sometimes, or never congruent to $\angle 2$. Explain.

28. Determine the minimum number of angle measures you would have to know to find the measures of all of the angles in the figure.

29. **OPEN ENDED** Use a straightedge and protractor to draw a pair of parallel lines cut by a transversal so that one pair of corresponding angles measures 35°.

30. **REASONING** Make a conjecture about two exterior angles on the same side of a transversal. Prove your conjecture.

31. **CHALLENGE** Explain why you can conclude that $\angle 2$ and $\angle 6$ are supplementary, but you cannot state that $\angle 4$ and $\angle 6$ are necessarily supplementary.

32. **Writing in Math** Use the information about art from page 149 to explain how angles and lines can be used in art. Include a description of how angles and lines are used to create patterns and examples from two different artists that use lines and angles.
33. An architect wants to design a shopping district between Huntington Avenue, Payton Drive, and Mesopotamia Boulevard.

What are the measures of the three angles of the shopping district?
A 90°, 70°, 20°
B 90°, 62°, 38°
C 90°, 60°, 30°
D 100°, 30°, 20°

34. REVIEW Emma has been hiring more workers for her donut shop. The table shows the number of additional workers compared to the number of donuts the shop can make in an hour.

<table>
<thead>
<tr>
<th>Additional Workers</th>
<th>Donuts Made</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>45</td>
</tr>
<tr>
<td>1</td>
<td>70</td>
</tr>
<tr>
<td>2</td>
<td>95</td>
</tr>
<tr>
<td>3</td>
<td>120</td>
</tr>
</tbody>
</table>

Which equation best describes the relationship between \( w \), the number of additional workers, and \( d \), the number of donuts the shop can make in an hour?
F \( 45w + 25 = d \)
G \( d - 45 = 25w \)
H \( d + 45 = 25w \)
J \( 45w - 25 = d \)

For Exercises 35–37, refer to the figure at the right. (Lesson 3-1)

35. Name all segments parallel to \( \overline{AB} \).
36. Name all segments skew to \( \overline{CH} \).
37. Name all planes parallel to \( AEF \).

Find the measure of each numbered angle. (Lesson 2-8)
38. \( \overline{1} \) 124°
39. \( \overline{2} \) 53°

Identify the hypothesis and conclusion of each statement. (Lesson 2-3)
40. If it rains this evening, then I will mow the lawn tomorrow.
41. A balanced diet will keep you healthy.

PREREQUISITE SKILL Simplify each expression.
42. \( \frac{7 - 9}{8 - 5} \)
43. \( \frac{-3 - 6}{2 - 8} \)
44. \( \frac{14 - 11}{23 - 15} \)
45. \( \frac{15 - 23}{14 - 11} \)
46. \( \frac{2}{9} \cdot \left( \frac{-18}{5} \right) \)
Graphing Calculator Lab
Investigating Slope

The rate of change of the steepness of a line is called the slope. Slope can be used to investigate the relationship between real-world quantities.

**Set Up the Lab**
- Connect the data collection device to the graphing calculator. Place on a desk or table so that the data collection device can read the motion of a walker.
- Mark the floor at a distance of 1 meter and 6 meters from the device.

**Activity**

**Step 1** Have one group member stand at the 1-meter mark. When another group member presses the button to begin collecting data, the walker begins to walk away from the device. Walk at a slow, steady pace.

**Step 2** Stop collecting data when the walker passes the 6-meter mark. Save the data as Trial 1.

**Step 3** Repeat the experiment, walking more quickly. Save the data as Trial 2.

**Step 4** For Trial 3, repeat the experiment by walking toward the data collection device slowly.

**Step 5** Repeat the experiment, walking quickly toward the device. Save the data as Trial 4.

**Analyze the Results**

1. Compare and contrast the graphs for Trials 1 and 2.

2. Use the TRACE feature of the calculator to find the coordinates of two points on each graph. Record the coordinates in a table like the one shown. Then use the points to find the slope of the line.

3. Compare and contrast the slopes for Trials 1 and 2.

4. The slope of a line describes the rate of change of the quantities represented by the $x$- and $y$-values. What is represented by the rate of change in this experiment?

5. **Make a Conjecture** What would the graph look like if you were to collect data while the walker was standing still? Use the data collection device to test your conjecture.
Traffic signs are often used to alert drivers to road conditions. The sign at the right indicates a hill with a 6% grade. This means that the road will rise or fall 6 feet vertically for every 100 horizontal feet traveled.

### Slope of a Line

The **slope** of a line is the ratio of its vertical rise to its horizontal run.

\[
\text{slope} = \frac{\text{vertical rise}}{\text{horizontal run}}
\]

You can use the coordinates of points on a line to derive a formula for slope. In a coordinate plane, the slope of a line is the ratio of the change along the \( y \)-axis to the change along the \( x \)-axis. The vertical rise is computed by finding the difference in \( y \)-values of the coordinates of two points on the line. Likewise, the horizontal run is defined by the difference in \( x \)-values of the coordinates of two points on the line.

### Slope Formula

The slope \( m \) of a line containing two points with coordinates \((x_1, y_1)\) and \((x_2, y_2)\) is given by the formula

\[
m = \frac{y_2 - y_1}{x_2 - x_1}, \text{ where } x_1 \neq x_2.
\]

The slope of a line indicates whether the line rises to the right, falls to the right, or is horizontal. The slope of a vertical line, where \( x_1 = x_2 \), is undefined.
EXAMPLE Find the Slope of a Line

Find the slope of each line.

a. From \((-3, -2)\) to \((-1, 2)\), go up 4 units and right 2 units.
   
   \[
   \frac{\text{rise}}{\text{run}} = \frac{4}{2} \quad \text{or} \quad 2
   \]

   Let \((-4, 0)\) be \((x_1, y_1)\) and \((0, -1)\) be \((x_2, y_2)\).

   \[
   m = \frac{y_2 - y_1}{x_2 - x_1} \quad \text{Slope formula}
   \]

   \[
   = \frac{-1 - 0}{0 - (-4)} \quad \text{or} \quad \frac{-1}{4}
   \]

b. The line containing \((-6, -2)\) and \((3, -5)\)

   \[
   m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{-5 - 5}{3 - (-1)} = \frac{-10}{4} \quad \text{or} \quad 0
   \]

   \[
   = \frac{0}{4} \quad \text{or} \quad 0
   \]

1A. the line containing \((-6, -2)\) and \((3, -5)\)

1B. the line containing \((8, -3)\) and \((-6, -2)\)

The slope of a line can be used to identify the coordinates of any point on the line. It can also be used to describe a rate of change. The rate of change describes how a quantity is changing over time.

Use Rate of Change to Solve a Problem

FITNESS Refer to the information at the left. If sales of fitness equipment increase at the same rate, what will the total sales be in 2010?

Let \((x_1, y_1) = (2003, 4553)\) and \(m = 314.3\).

\[
314.3 = \frac{y_2 - y_1}{x_2 - x_1} \quad \text{Slope formula}
\]

\[
314.3 = \frac{y_2 - 4553}{2010 - 2003} \quad m = 314.3, y_1 = 4553, x_1 = 2003, \text{ and } x_2 = 2010
\]

\[
314.3 = \frac{y_2 - 4553}{7} \quad \text{Simplify.}
\]
200.1 = y_2 - 4553 \quad \text{Multiply each side by 7.}

6753.1 = y_2 \quad \text{Add 4553 to each side.}

The coordinates of the point representing the sales for 2010 are (2010, 6753.1). Thus, the total sales in 2010 will be about $6753.1 million.

2. **DOWNLOADS** In 2004, 200 million songs were legally downloaded from the Internet. In 2003, 20 million songs were legally downloaded. If this increases at the same rate, how many songs will be legally downloaded in 2008?

Parallel and Perpendicular Lines In the Geometry Lab, you will explore the slopes of parallel and perpendicular lines.

The Geometry Lab suggests two important algebraic properties of parallel and perpendicular lines.

**POSTULATES**

3.2 Two nonvertical lines have the same slope if and only if they are parallel.

3.3 Two nonvertical lines are perpendicular if and only if the product of their slopes is $-1$. 
3. Determine whether \( \overrightarrow{AB} \) and \( \overrightarrow{CD} \) are parallel, perpendicular, or neither.

a. \( A(-2, -5), B(4, 7), C(0, 2), D(8, -2) \)

Find the slopes of \( \overrightarrow{AB} \) and \( \overrightarrow{CD} \).

\[
\text{slope of } \overrightarrow{AB} = \frac{7 - (-5)}{4 - (-2)} = \frac{12}{6} = 2
\]

\[
\text{slope of } \overrightarrow{CD} = \frac{-2 - 2}{8 - 0} = \frac{-4}{8} = -\frac{1}{2}
\]

The product of the slopes is \( 2 \left( -\frac{1}{2} \right) \) or \(-1\). So, \( \overrightarrow{AB} \) is perpendicular to \( \overrightarrow{CD} \).

b. \( A(-8, -7), B(4, -4), C(-2, -5), D(1, 7) \)

\[
\text{slope of } \overrightarrow{AB} = \frac{-4 - (-7)}{4 - (-8)} = \frac{3}{12} = \frac{1}{4}
\]

\[
\text{slope of } \overrightarrow{CD} = \frac{7 - (-5)}{1 - (-2)} = \frac{12}{3} = 4
\]

The slopes are not the same, so \( \overrightarrow{AB} \) and \( \overrightarrow{CD} \) are not parallel. The product of the slopes is \( 4 \left( \frac{1}{4} \right) \) or 1. So, \( \overrightarrow{AB} \) and \( \overrightarrow{CD} \) are neither parallel nor perpendicular.

3A. \( A(14, 13), B(-11, 0), C(-3, 7), D(-4, -5) \)

3B. \( A(3, 6), B(-9, 2), C(-12, -6), D(15, 3) \)

The relationships of the slopes of lines can be used to graph a line parallel or perpendicular to a given line.

4. **Use Slope to Graph a Line**

Graph the line that contains \( P(-2, 1) \) and is perpendicular to \( \overrightarrow{JK} \) with \( J(-5, -4) \) and \( K(0, -2) \).

First, find the slope of \( \overrightarrow{JK} \).

\[
m = \frac{y_2 - y_1}{x_2 - x_1} \quad \text{slope formula}
\]

\[
= \frac{-2 - (-4)}{0 - (-5)} \quad \text{substitution}
\]

\[
= \frac{2}{5} \quad \text{simplify}
\]

The product of the slopes of two perpendicular lines is \(-1\).

Since \( \frac{2}{5} \left( \frac{-5}{2} \right) = -1 \), the slope of the line perpendicular to \( \overrightarrow{JK} \) through \( P(-2, 1) \) is \( \frac{-5}{2} \).

Graph the line. Start at \((-2, 1)\). Move down 5 units and then move right 2 units.

Label the point \( Q \). Draw \( \overrightarrow{PQ} \).

4. Graph the line that contains \( P(0, 1) \) and is perpendicular to \( \overrightarrow{QR} \) with \( Q(-6, -2) \) and \( R(0, -6) \).
Find the slope of each line.

1. \( \ell \)
2. \( m \)

**Example 2**
For Exercises 3–5, use the following information.
A certain mountain bike trail has a section of trail with a grade of 8%.
3. What is the slope of the hill?
4. After riding on the trail, a biker is 120 meters below her original starting position. If her starting position is represented by the origin on a coordinate plane, what are possible coordinates of her current position?
5. How far has she traveled down the hill? Round to the nearest meter.

**Example 3**
6. Determine whether \( \vec{GH} \) and \( \vec{RS} \) are parallel, perpendicular, or neither given \( G(15, -9), H(9, -9), R(-4, -1) \), and \( S(3, -1) \).

**Example 4**
Graph the line that satisfies each condition.
7. slope = 2, contains \( P(1, 2) \)
8. contains \( A(6, 4) \), perpendicular to \( \vec{MN} \) with \( M(5, 0) \) and \( N(1, 2) \)

**Exercises**

Find the slope of each line.

9. \( \vec{AB} \)
10. \( \vec{PQ} \)
11. \( \vec{LM} \)
12. \( \vec{EF} \)
13. a line parallel to \( \vec{LM} \)
14. a line perpendicular to \( \vec{PQ} \)
15. a line perpendicular to \( \vec{EF} \)
16. a line parallel to \( \vec{AB} \)

Determine the slope of the line that contains the given points.

17. \( A(0, 2) \), \( B(7, 3) \)
18. \( C(-2, -3) \), \( D(-6, -5) \)
19. \( W(3, 2) \), \( X(4, -3) \)
20. \( Y(1, 7) \), \( Z(4, 3) \)

21. RECREATION
Paintball is one of the fastest growing sports. In 2002, 1,949,000 Americans from 12–17 years old participated in paintball. In 2005, 2,209,000 participated. If participation increases at the same rate, what will the participation be in 2012 to the nearest thousand?
22. **TRAVEL** On average, the rate of travel to Canada has been increasing by 486,500 visitors per year. In 2002, 16,161,000 Americans visited Canada. Approximately how many people will visit Canada in 2010?

Determine whether $\overrightarrow{PQ}$ and $\overrightarrow{UV}$ are parallel, perpendicular, or neither.

23. $P(-3, -2), Q(9, 1), U(3, 6), V(5, -2)$  
24. $P(-4, 0), Q(0, 3), U(-4, -3), V(8, 6)$  
25. $P(1, 1), Q(9, 8), U(-6, 1), V(2, 8)$  
26. $P(-9, 2), Q(0, 1), U(-1, 8), V(-2, -1)$

Graph the line that satisfies each condition.

27. slope = $-4$, passes through $P(-2, 1)$  
28. contains $A(-1, -3)$, parallel to $\overrightarrow{CD}$ with $C(-1, 7)$ and $D(5, 1)$  
29. contains $M(4, 1)$, perpendicular to $\overrightarrow{GH}$ with $G(0, 3)$ and $H(-3, 0)$  
30. slope = $\frac{2}{3}$, contains $J(-7, -1)$  
31. contains $Q(-2, -4)$, parallel to $\overrightarrow{KL}$ with $K(2, 7)$ and $L(2, -12)$  
32. contains $W(6, 4)$, perpendicular to $\overrightarrow{DE}$ with $D(0, 2)$ and $E(5, 0)$.

35. Determine the value of $x$ so that a line containing $(6, 2)$ and $(x, -1)$ has a slope of $-\frac{3}{7}$. Then graph the line.

36. Find the value of $x$ so that the line containing $(4, 8)$ and $(2, -1)$ is perpendicular to the line containing $(x, 2)$ and $(-4, 5)$. Graph the lines.

**POPULATION** For Exercises 37–39, refer to the graph.

37. Estimate the annual rate of change of the median age from 1970 to 2000.

38. If the median age continues to increase at the same rate, what will be the median age in 2010?

39. Suppose that after 2000, the median age increases by $\frac{1}{3}$ of a year annually. In what year will the median age be 40.6?

**STADIUMS** For Exercises 40–42 use the following information.

Monster Park is home to the San Francisco 49ers. The attendance in 2000 was 541,960, and the attendance in 2004 was 518,271.

40. What is the approximate rate of change in attendance from 2000 to 2004?

41. If this rate of change continues, predict the attendance for 2012.

42. Will the attendance continue to decrease indefinitely? Explain.

43. **FIND THE ERROR** Curtis and Lori calculated the slope of the line containing $A(15, 4)$ and $B(-6, -13)$. Who is correct? Explain your reasoning.
44. **Open Ended** Give a real-world example of a line with a slope of 0 and a real-world example of a line with an undefined slope.

45. **Which One Doesn’t Belong?** Identify the term that does not belong with the other three. Explain your reasoning.

- slope
- rate of change
- skew
- steepness

46. **Challenge** The line containing the point \( (5 + 2t, -3 + t) \) can be described by the equations \( x = 5 + 2t \) and \( y = -3 + t \). Write the slope-intercept form of the equation of this line.

47. **Writing in Math** Use the information about grade on page 156 to explain how slope is used in transportation. Include an explanation of why it is sometimes important to display the grade of a road and an example of slope used in transportation other than roads.

48. Which graph best represents the line passing through the point at \((-2, 5)\) and perpendicular to the graph of \( y = \frac{2}{3}x \)?

49. Which equation describes the line that passes through the point at \((-2, 1)\) and is perpendicular to the line \( y = \frac{1}{3}x + 5 \)?

- **F** \( y = 3x + 7 \)
- **G** \( y = -3x - 5 \)
- **H** \( y = \frac{1}{3}x + 7 \)
- **J** \( y = -\frac{1}{3}x - 5 \)

50. **Review** Which expression is equivalent to \( 4(x - 6) - \frac{1}{2}(x^2 + 8) \)?

- **A** \( 4x^2 + 4x - 28 \)
- **B** \( -\frac{1}{2}x^2 + 6x - 24 \)
- **C** \( -\frac{1}{2}x^2 + 4x - 28 \)
- **D** \( 3x - 20 \)
Lesson 3-3  Slopes of Lines

In the figure, \( \overline{QR} \parallel \overline{TS}, \overline{QT} \parallel \overline{RS} \), and \( m \angle 1 = 131 \). Find the measure of each angle.  \( \text{(Lesson 3-2)} \)

51. \( \angle 6 \)  
52. \( \angle 7 \)  
53. \( \angle 4 \)  
54. \( \angle 2 \)  
55. \( \angle 5 \)  
56. \( \angle 8 \)

State the transversal that forms each pair of angles. Then identify the special name for each angle pair. \( \text{(Lesson 3-1)} \)

57. \( \angle 1 \) and \( \angle 14 \)  
58. \( \angle 2 \) and \( \angle 10 \)  
59. \( \angle 3 \) and \( \angle 6 \)  
60. \( \angle 14 \) and \( \angle 15 \)  
61. \( \angle 7 \) and \( \angle 12 \)  
62. \( \angle 9 \) and \( \angle 11 \)

63. **PROOF**  Write a two-column proof. \( \text{(Lesson 2-6)} \)

Given:  
\[ AC = DF \]  
\[ AB = DE \]  

Prove:  
\[ BC = EF \]

Find the perimeter of \( \triangle ABC \) to the nearest hundredth, given the coordinates of its vertices. \( \text{(Lesson 1-6)} \)

64. \( A(10, -6), B(-2, -8), C(-5, -7) \)  
65. \( A(-3, 2), B(2, -9), C(0, -10) \)

**DAYLIGHT SAVING TIME**  All of the states in the United States observe Daylight Saving Time except for Arizona and Hawaii. \( \text{(Lesson 2-3)} \)

66. Write a true conditional statement in if-then form for Daylight Saving Time.

67. Write the converse of the true conditional statement. State whether the statement is *true* or *false*. If false, find a counterexample.

Construct a truth table for each compound statement. \( \text{(Lesson 2-2)} \)

68. \( p \) and \( q \)

69. \( p \) or \( \neg q \)

70. \( \neg p \land q \)

71. \( \neg p \land \neg q \)

Make a conjecture based on the given information. Draw a figure to illustrate your conjecture. \( \text{(Lesson 2-1)} \)

72. Points \( H, I, \) and \( J \) are each located on different sides of a triangle.

73. Collinear points \( X, Y, \) and \( Z; Z \) is between \( X \) and \( Y \).

74. \( R(3, -4), S(-2, -4), \) and \( T(0, -4) \)

**PREREQUISITE SKILL**  Solve each equation for \( y \). \( \text{(Pages 781 and 782)} \)

75. \( 2x + y = 7 \)

76. \( 2x + 4y = 5 \)

77. \( 5x - 2y + 4 = 0 \)
1. **MULTIPLE CHOICE** \(\angle 3\) and \(\angle 5\) are \(\_\_\_\_\_\_\_\_\_\_\_\_\_\_\)_ angles. (Lesson 3-1)

   \[\begin{array}{cccc}
   1 & 2 & 3 & 4 \\
   5 & 6 & 7 & 8
   \end{array}\]

   A alternate exterior  
   B alternate interior  
   C consecutive interior  
   D corresponding

   Name the transversal that forms each pair of angles. Then identify the special name for the angle pair. (Lesson 3-1)

2. \(\angle 1\) and \(\angle 8\)
3. \(\angle 6\) and \(\angle 10\)
4. \(\angle 11\) and \(\angle 14\)

Refer to the figure above. Find the measure of each angle if \(\ell \parallel m\) and \(m\angle 1 = 105\). (Lesson 3-2)

5. \(\angle 6\)
6. \(\angle 4\)

In the figure, \(m\angle 9 = 75\). Find the measure of each angle. (Lesson 3-2)

7. \(\angle 3\)
8. \(\angle 5\)
9. \(\angle 6\)
10. \(\angle 8\)
11. \(\angle 11\)
12. \(\angle 12\)

13. **MULTIPLE CHOICE** Find the slope of a line perpendicular to the line containing \((-5, 1)\) and \((-3, -2)\). (Lesson 3-3)

   \[\begin{array}{cccc}
   F & -\frac{2}{3} & G & -\frac{3}{2} \\
   H & \frac{2}{3} & J & \frac{3}{2}
   \end{array}\]

Determine whether \(\overrightarrow{AB}\) and \(\overrightarrow{CD}\) are parallel, perpendicular, or neither. (Lesson 3-3)

14. \(A(3, -1), B(6, 1), C(-2, -2), D(2, 4)\)
15. \(A(-3, -11), B(3, 13), C(0, -6), D(8, -8)\)

Find the slope of each line. (Lesson 3-3)

16. \(p\)
17. a line parallel to \(q\)
18. a line perpendicular to \(r\)

**BASEBALL** For Exercises 19 and 20 use the following information.

Minute Maid Ballpark in Houston is home to the Houston Astros. The average attendance per game in 2002 and 2004 are shown in the table. (Lesson 3-3)

<table>
<thead>
<tr>
<th>Year</th>
<th>Average Attendance</th>
</tr>
</thead>
<tbody>
<tr>
<td>2002</td>
<td>31,078</td>
</tr>
<tr>
<td>2004</td>
<td>38,122</td>
</tr>
</tbody>
</table>

19. What is the rate of change in average attendance per game from 2002 to 2004?
20. If this rate of change continues, predict the average attendance per game for the 2012 season.
LESSON 3-4
Equations of Lines

Main Ideas
- Write an equation of a line given information about its graph.
- Solve problems by writing equations.

New Vocabulary
slope-intercept form
point-slope form

Write Equations of Lines You may remember from algebra that an equation of a line can be written given any of the following:
- the slope and the y-intercept,
- the slope and the coordinates of a point on the line, or
- the coordinates of two points on the line.

The graph of $C = 0.1t + 35$ has a slope of 0.1, and it intersects the y-axis at 35. These two values can be used to write an equation of the line. The slope-intercept form of a linear equation is $y = mx + b$, where $m$ is the slope of the line and $b$ is the y-intercept.

\[ y = mx + b \quad \text{or} \quad C = 0.1t + 35 \]

For Example 1, write an equation in slope-intercept form of the line with slope of $-4$ and y-intercept of 1.

\[ y = mx + b \quad \text{or} \quad y = -4x + 1 \]

The slope-intercept form of the equation of the line is $y = -4x + 1$.

Check Your Progress
1. Write an equation in slope-intercept form of the line with slope of 3 and y-intercept of $-8$. 

Extra Examples at geometryonline.com
Another method used to write an equation of a line is the point-slope form of a linear equation. The point-slope form is \( y - y_1 = m(x - x_1) \), where \((x_1, y_1)\) are the coordinates of any point on the line and \(m\) is the slope of the line.

**EXAMPLE** Slope and a Point

Write an equation in point-slope form of the line with slope of \(-\frac{1}{2}\) that contains \((3, -7)\).

\[
y - y_1 = m(x - x_1) \quad \text{Point-slope form}
\]

\[
y - (-7) = -\frac{1}{2}(x - 3) \quad m = -\frac{1}{2}, (x_1, y_1) = (3, -7) \quad \text{Simplify.}
\]

The point-slope form of the equation of the line is \(y + 7 = -\frac{1}{2}(x - 3)\).

**CHECK Your Progress**

2. Write an equation in point-slope form of the line with slope of 4 that contains \((-3, -6)\).

Both the slope-intercept form and the point-slope form require the slope of a line in order to write an equation. There are occasions when the slope of a line is not given. In cases such as these, use two points on the line to calculate the slope. Then use either the slope-intercept form or the point-slope form to write an equation.

**EXAMPLE** Two Points

Write an equation in slope-intercept form for line \(\ell\).

Find the slope of \(\ell\) by using \(A(-1, 6)\) and \(B(3, 2)\).

\[
m = \frac{y_2 - y_1}{x_2 - x_1} \quad \text{Slope formula}
\]

\[
= \frac{2 - 6}{3 - (-1)} \quad x_1 = -1, x_2 = 3, y_1 = 6, y_2 = 2 \quad \text{Simplify.}
\]

\[
= -\frac{4}{4} \quad \text{or} -1
\]

Now use the point-slope form and either point to write an equation.

**Method 1** Use Point \(A\).

\[
y - y_1 = m(x - x_1) \quad \text{Point-slope form}
\]

\[
y - 6 = -1[x - (-1)] \quad m = -1, (x, y_1) = (-1, 6) \quad \text{Simplify.}
\]

\[
y - 6 = -1(x + 1)
\]

\[
y - 6 = -x - 1 \quad \text{Distributive Property}
\]

\[
y = -x + 5 \quad \text{Add 6 to each side.}
\]
Method 2  Use Point B.
\[ y - y_1 = m(x - x_1) \]  \hspace{1cm} \text{Point-slope form}
\[ y - 2 = -1(x - 3) \]  \hspace{1cm} m = -1, (x_1, y_1) = (3, 2)
\[ y - 2 = -x + 3 \]  \hspace{1cm} \text{Distributive Property}
\[ y = -x + 5 \]  \hspace{1cm} \text{Add 2 to each side.}

The result is the same using either point.

3. Write an equation in slope-intercept form for the line that contains (-2, 4) and (8, 10).

EXAMPLE One Point and an Equation

4. Write an equation in slope-intercept form for a line containing (2, 0) that is perpendicular to the line with equation \( y = -x + 5 \).

Since the slope of the line \( y = -x + 5 \) is -1, the slope of a line perpendicular to it is 1.
\[ y - y_1 = m(x - x_1) \]  \hspace{1cm} \text{Point-slope form}
\[ y - 0 = 1(x - 2) \]  \hspace{1cm} m = 1, (x_1, y_1) = (2, 0)
\[ y = x - 2 \]  \hspace{1cm} \text{Distributive Property}

4. Write an equation in slope-intercept form for a line containing (-3, 6) that is parallel to the graph of \( y = -\frac{3}{4}x + 3 \).

Write Equations to Solve Problems  Many real-world situations can be modeled using linear equations. In many business applications, the slope represents a rate.

Write Linear Equations

5. WRITE LINEAR EQUATIONS  Gracia’s current wireless phone plan charges $39.95 per month for unlimited calls and $0.05 per text message.

a. Write an equation to represent the total monthly cost \( C \) for \( t \) text messages.

For each text message, the cost increases $0.05. So, the rate of change, or slope, is 0.05. The \( y \)-intercept is located where 0 messages are used, or $39.95.
\[ C = mt + b \]  \hspace{1cm} \text{Slope-intercept form}
\[ = 0.05t + 39.95 \]  \hspace{1cm} m = 0.05, b = 39.95

The total monthly cost can be represented by the equation \( C = 0.05t + 39.95 \).
Write an equation in slope-intercept form of the line having the given slope and \( y \)-intercept.

1. \( m = \frac{1}{2} \)  \( y \)-intercept: 4
2. \( m = 3 \)  \( y \)-intercept: \(-4\)
3. \( m = -\frac{3}{5} \)  \( y \)-intercept at \((0, -2)\)

Write an equation in point-slope form of the line having the given slope that contains the given point.

4. \( m = \frac{3}{2}, (4, -1) \)
5. \( m = 3, (7, 5) \)
6. \( m = 1.25, (20, 137.5) \)

Write an equation in slope-intercept form for each line in the graph.

7. \( \ell \)
8. \( k \)
9. the line parallel to \( \ell \) that contains \((4, 4)\)
10. the line perpendicular to \( \ell \) that contains \((2, -1)\)

**Example 5**  
**MUSIC** For Exercises 11 and 12, use the following information.
Justin pays $5 per month for a subscription to an online music service. He pays $0.79 per song that he downloads. Another online music store offers 40 downloads per month for a monthly fee of $10.

11. Write an equation to represent the total monthly cost for each plan.
12. If Justin downloads 15 songs per month, should he keep his current plan, or change to the other plan? Explain.
Write an equation in slope-intercept form of the line having the given slope and \( y \)-intercept.

13. \( m: 3, \) \( y \)-intercept: \(-4\)  
14. \( m: 2, \) \( (0, 8)\)  
15. \( m: \frac{5}{8}, \) \( (0, -6)\)  
16. \( m: \frac{2}{9}, \) \( y \)-intercept: \( \frac{1}{3} \)  
17. \( m: -1, \) \( b: -3 \)  
18. \( m: -\frac{2}{12}, \) \( b: 1 \)

Write an equation in point-slope form of the line with the given slope that contains the given point.

19. \( m = 2, \) \( (3, 1) \)  
20. \( m = -5, \) \( (4, 7) \)  
21. \( m = -\frac{4}{5}, \) \( (-12, -5) \)  
22. \( m = \frac{1}{16}, \) \( (3, 11) \)  
23. \( m = 0.48, \) \( (5, 17.12) \)  
24. \( m = -1.3, \) \( (10, 87.5) \)

Write an equation in slope-intercept form for each line in the graph.

25. \( k \)  
26. \( \ell \)  
27. \( m \)  
28. \( n \)  
29. perpendicular to line \( \ell \), contains \(-1, 6\)  
30. parallel to line \( k \), contains \( (7, 0) \)  
31. parallel to line \( n \), contains \( (0, 0) \)  
32. perpendicular to line \( m \), contains \(-3, -3\)

**BUSINESS** For Exercises 33 and 34, use the following information.

The Rainbow Paint Company sells an average of 750 gallons of paint each day.  
33. The store has 10,800 gallons of paint in stock. Write an equation in slope-intercept form that describes how many gallons of paint will be on hand after \( x \) days if no new stock is added.  
34. Draw a graph that represents the number of gallons of paint on hand at any given time.

**MAPS** For Exercises 35 and 36, use the following information.

Suppose a map of Pennsylvania is placed on a coordinate plane with the western corner of Lehigh County at the origin. Berks, Montgomery, and Lehigh Counties meet at \( (80, -70) \), and Montgomery, Lehigh, and Bucks Counties meet at \( (90, -80) \).

35. Write an equation in slope-intercept form that models the county line between Lehigh and Montgomery Counties.  
36. The line separating Lehigh and Bucks Counties runs perpendicular to the Lehigh/Montgomery County line. Write an equation in slope-intercept form of the line that contains the Lehigh/Bucks County line.
Write an equation in slope-intercept form for the line that satisfies the given conditions.

37. $x$-intercept = 5, $y$-intercept = 3
38. contains (4, −1) and (−2, −1)
39. contains (−5, −3) and (10, −6)
40. $x$-intercept = 5, $y$-intercept = −1
41. contains (−6, 8) and (−6, −4)
42. contains (−4, −1) and (−8, −5)

43. OPEN ENDED Write equations in slope-intercept form for two lines that contain (−1, −5).

44. CHALLENGE The point-slope form of an equation of a line can be rewritten as $y = m(x - x_1) + y_1$. Describe how the graph of $y = m(x - x_1) + y_1$ is related to the graph of $y = mx$.

45. Writing in Math Use the information about wireless phone and text messages rates on page 165 to explain how the equation of a line can describe wireless telephone service. Include a description of how you can use equations to compare various plans.

46. REVIEW Jamie is collecting money to buy an $81 gift for her teacher. She has already contributed $24. She will collect $3 from each contributing student. If the equation below shows this relationship, from how many students must Jamie collect?

$$3s + 24 = 81$$

A 3 students  C 12 students
B 9 students  D 19 students

47. The graph of which equation passes through (−3, −2) and is perpendicular to the graph of $y = \frac{3}{4}x + 8$?

F $y = -\frac{4}{3}x - 6$
G $y = -\frac{4}{3}x + 5$
H $y = \frac{3}{4}x + \frac{1}{4}$
J $y = -\frac{3}{4}x - 5$

48. SOFTWARE In 2000, $498$ million was spent on educational software. In 2004, the sales had dropped to $152$ million. What is the rate of change between 2000 and 2004? (Lesson 3-3)

In the figure, $m\angle 1 = 58^\circ$, $m\angle 2 = 47^\circ$, and $m\angle 3 = 26^\circ$. Find the measure of each angle. (Lesson 3-2)

49. $\angle 7$
50. $\angle 5$
51. $\angle 6$
52. $\angle 4$
53. $\angle 8$
54. $\angle 9$

55. consecutive interior angles
56. corresponding angles
57. alternate exterior angles

EXTRA See pages 806, 830.
PRACTICE Self-Check Quiz at geometryonline.com

PRACTICE 170 Chapter 3 Parallel and Perpendicular Lines
Geometry Lab
Equations of Perpendicular Bisectors

You can apply what you have learned about slope and equations of lines to geometric figures on a plane.

**ACTIVITY**

Find the equation of a line that is a perpendicular bisector of segment $AB$ with endpoints $A(-3, 3)$ and $B(4, 0)$.

**Step 1** A segment bisector contains the midpoint of the segment. Use the Midpoint Formula to find the midpoint $M$ of $AB$.

$$M\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right) = M\left(\frac{-3 + 4}{2}, \frac{3 + 0}{2}\right) = M\left(\frac{1}{2}, \frac{3}{2}\right)$$

**Step 2** A perpendicular bisector is perpendicular to the segment through the midpoint. To find the slope of the bisector, first find the slope of $AB$.

$$m = \frac{y_2 - y_1}{x_2 - x_1} \quad \text{Slope Formula}$$

$$= \frac{0 - 3}{4 - (-3)} \quad \text{Simplify.}$$

$$x_1 = -3, x_2 = 4, y_1 = 3, y_2 = 0$$

$$= -\frac{3}{7}$$

**Step 3** Now use the point-slope form to write the equation of the line. The slope of the bisector is $\frac{7}{3}$ since $-\frac{3}{7} \cdot \frac{7}{3} = -1$.

$$y - y_1 = m(x - x_1) \quad \text{Point-slope form}$$

$$y - 3 = \frac{7}{3}(x - \frac{1}{2})$$

$$y - \frac{3}{2} = \frac{7}{3}x - \frac{7}{6} \quad \text{Distributive Property}$$

$$y = \frac{7}{3}x + \frac{1}{3} \quad \text{Add } \frac{3}{2} \text{ to each side.}$$

**Exercises**

Find the equation of the perpendicular bisector of $\overline{PQ}$ for the given endpoints.

1. $P(5, 2), Q(7, 4)$  
2. $P(-3, 9), \overline{Q}(-1, 5)$  
3. $P(-6, -1), Q(8, 7)$

4. $P(-2, 1), Q(0, -3)$  
5. $P(0, 1.6), Q(0.5, 2.1)$  
6. $P(-7, 3), Q(5, 3)$

7. Extend what you have learned to find the equations of the lines that contain the sides of $\triangle XYZ$ with vertices $X(-2, 0), Y(1, 3)$, and $Z(3, -1)$.
Have you ever been in a tall building and looked down at a parking lot? The parking lot is full of line segments that appear to be parallel. The workers who paint these lines must be certain that they are parallel.

**Identify Parallel Lines** When each stripe of a parking space intersects the center line, the angles formed are corresponding angles. If the lines are parallel, we know that the corresponding angles are congruent. Conversely, if the corresponding angles are congruent, then the lines must be parallel.

**POSTULATE 3.4**

If two lines in a plane are cut by a transversal so that corresponding angles are congruent, then the lines are parallel.

*Abbreviation:* If corr. are \(\cong\), then lines are \(\parallel\).

*Examples:* If \(\angle 1 \cong \angle 5\), \(\angle 2 \cong \angle 6\), \(\angle 3 \cong \angle 7\), or \(\angle 4 \cong \angle 8\), then \(m \parallel n\).

Postulate 3.4 justifies the construction of parallel lines.

**CONSTRUCTION**

**Parallel Line Through a Point Not on Line**

**Step 1** Use a straightedge to draw \(\overline{MN}\). Draw a point \(P\) that is not on \(\overline{MN}\). Draw \(\overline{PM}\).

**Step 2** Copy \(\angle PMN\) so that \(P\) is the vertex of the new angle. Label the intersection points \(Q\) and \(R\).

**Step 3** Draw \(\overline{PQ}\). Because \(\angle RPQ \cong \angle PMN\) by construction and they are corresponding angles, \(\overline{PQ} \parallel \overline{MN}\).
The construction establishes that there is at least one line through \( P \) that is parallel to \( MN \). In 1795, Scottish physicist and mathematician John Playfair provided the modern version of Euclid’s Parallel Postulate, which states there is exactly one line parallel to a line through a given point not on the line.

Parallel lines with a transversal create many pairs of congruent angles. Conversely, those pairs of congruent angles can determine whether a pair of lines is parallel.

### THEOREM

<table>
<thead>
<tr>
<th>Theorems</th>
<th>Examples</th>
<th>Models</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>3.5</strong> If two lines in a plane are cut by a transversal so that a pair of alternate exterior angles is congruent, then the two lines are parallel. <strong>Abbreviation:</strong> If alt. ext. ( \angle ) are ( \cong ), then lines are ( \parallel ).</td>
<td>If ( \angle 1 \cong \angle 8 ) or if ( \angle 2 \cong \angle 7 ), then ( m \parallel n ).</td>
<td><img src="image1" alt="Diagram" /></td>
</tr>
<tr>
<td><strong>3.6</strong> If two lines in a plane are cut by a transversal so that a pair of consecutive interior angles is supplementary, then the lines are parallel. <strong>Abbreviation:</strong> If cons. int. ( \angle ) are suppl., then lines are ( \parallel ).</td>
<td>If ( m\angle 3 + m\angle 5 ) are supplementary or if ( m\angle 4 ) and ( m\angle 6 ) are supplementary, then ( m \parallel n ).</td>
<td><img src="image2" alt="Diagram" /></td>
</tr>
<tr>
<td><strong>3.7</strong> If two lines in a plane are cut by a transversal so that a pair of alternate interior angles is congruent, then the lines are parallel. <strong>Abbreviation:</strong> If alt. int. ( \angle ) are ( \cong ), then lines are ( \parallel ).</td>
<td>If ( \angle 3 \cong \angle 6 ) or if ( \angle 4 \cong \angle 5 ), then ( m \parallel n ).</td>
<td><img src="image3" alt="Diagram" /></td>
</tr>
<tr>
<td><strong>3.8</strong> In a plane, if two lines are perpendicular to the same line, then they are parallel. <strong>Abbreviation:</strong> If 2 lines are ( \perp ) to the same line, then lines are ( \parallel ).</td>
<td>If ( \ell \perp m ) and ( \ell \perp n ), then ( m \parallel n ).</td>
<td><img src="image4" alt="Diagram" /></td>
</tr>
</tbody>
</table>

You will prove Theorems 3.5, 3.6, 3.7, and 3.8 in Check Your Progress 3 and Exercises 21, 22, and 20, respectively.

**EXAMPLE** **Identify Parallel Lines**

In the figure, \( BG \) bisects \( \angle ABH \). Determine which lines, if any, are parallel.

- The sum of the angle measures in a triangle must be 180, so \( m\angle BDF = 180 - (45 + 65) \) or 70.
- Since \( \angle BDF \) and \( \angle BGH \) have the same measure, they are congruent.
- Congruent corresponding angles indicate parallel lines. So, \( DF \parallel GH \). (continued on the next page)
• $\angle ABD \cong \angle DBF$, because $\overline{BG}$ bisects $\angle ABH$. So, $m\angle ABD = 45$.

• $\angle ABD$ and $\angle BDF$ are alternate interior angles, but they have different measures so they are not congruent.

• Thus, $\overrightarrow{AB}$ is not parallel to $\overrightarrow{DF}$ or $\overrightarrow{GH}$.

1. Given $\angle 2 \equiv \angle 8$, determine which lines, if any, are parallel. State the postulate or theorem that justifies your answer.

Angle relationships can be used to solve problems involving unknown values.

**Example** Solve Problems with Parallel Lines

**ALGEBRA** Find $x$ and $m\angle RSU$ so that $m \parallel n$.

**Explore** From the figure, you know that $m\angle RSU = 8x + 4$ and $m\angle STV = 9x - 11$. You also know that $\angle RSU$ and $\angle STV$ are corresponding angles.

**Plan** For line $m$ to be parallel to line $n$, the corresponding angles must be congruent. So, $m\angle RSU = m\angle STV$. Substitute the given angle measures into this equation and solve for $x$. Once you know the value of $x$, use substitution to find $m\angle RSU$.

**Solve**

$m\angle RSU = m\angle STV$ Corresponding angles

$8x + 4 = 9x - 11$ Substitution

$4 = x - 11$ Subtract $8x$ from each side.

$15 = x$ Add $11$ to each side.

Now use the value of $x$ to find $m\angle RSU$.

$m\angle RSU = 8x + 4$ Original equation

$= 8(15) + 4$ $x = 15$

$= 124$ Simplify.

**Check** Verify the angle measure by using the value of $x$ to find $m\angle STV$. That is, $9x - 11 = 9(15) - 11$ or 124. Since $m\angle RSU = m\angle STV$, $\angle RSU \equiv \angle STV$ and $m \parallel n$.

2A. Find $x$ so that $\overline{JK} \parallel \overline{MN}$.

2B. Find $m\angle JKM$.

CHECK Your Progress

3. PROOF Write a two-column proof of Theorem 3.5.

In Lesson 3-3, you learned that parallel lines have the same slope. You can use the slopes of lines to prove that lines are parallel.

EXAMPLE  Slope and Parallel Lines

Determine whether \( g \parallel f \).

slope of \( f \): \( m = \frac{4 - 0}{6 - 3} \) or \( \frac{4}{3} \)

slope of \( g \): \( m = \frac{4 - 0}{0 - (-3)} \) or \( \frac{4}{3} \)

Since the slopes are the same, \( g \parallel f \).

CHECK Your Progress

4. Line \( \ell \) contains points at \((-5, 3)\) and \((0, 4)\). Line \( m \) contains points at \((2, -\frac{2}{3})\) and \((12, 1)\). Determine whether \( \ell \parallel m \).

Example 1  (pp. 173–174)

Given the following information, determine which lines, if any, are parallel. State the postulate or theorem that justifies your answer.

1.  \( \angle 16 \cong \angle 3 \)
2.  \( \angle 4 \cong \angle 13 \)
3.  \( m\angle 14 + m\angle 10 = 180 \)
4.  \( \angle 1 \cong \angle 7 \)
5. Find \( x \) so that \( \ell \parallel m \).

6. **PHYSICS** The Hubble Telescope gathers parallel light rays and directs them to a central focal point. Use a protractor to measure several of the angles shown in the diagram. Are the lines parallel? Explain how you know.

7. Determine whether \( p \parallel q \).

Given the following information, determine which lines, if any, are parallel. State the postulate or theorem that justifies your answer.

8. \( \angle AEF \equiv \angle BFG \)

9. \( \angle EAB \equiv \angle DBC \)

10. \( \angle EFB \equiv \angle CBF \)

11. \( m\angle GFD + m\angle CBD = 180 \)

Find \( x \) so that \( \ell \parallel m \).

12. \( (9x - 4)^\circ, 140^\circ \)

13. \( (8x + 4)^\circ, (9x - 11)^\circ \)

14. \( (7x - 1)^\circ \)

15. \( (4 - 5x)^\circ, (7x + 100)^\circ \)

16. \( (14x + 9)^\circ \)

17. \( (178 - 3x)^\circ \)
Determine whether each pair of lines is parallel. Explain why or why not.

18. Determine whether the lines through each pair of points are parallel. Explain why or why not.
   - A(-4, 2), B(4, 4)
   - C(0, 0), D(4, 1)

19. Determine whether the lines through each pair of points are parallel. Explain why or why not.
   - A(-1, 1.5), B(2, 1.5)
   - C(1.5, 1.8), D(0, 1.5)

20. PROOF Copy and complete the proof of Theorem 3.8.
    Given: \(\ell \perp t\), \(m \perp t\)
    Prove: \(\ell \parallel m\)

   \[
   \begin{array}{c|c}
   \text{Statements} & \text{Reasons} \\
   \hline
   1. \ell \perp t, m \perp t & 1. \text{?} \\
   2. \angle 1 \text{ and } \angle 2 \text{ are right angles.} & 2. \text{?} \\
   3. \angle 1 \equiv \angle 2 & 3. \text{?} \\
   4. \ell \parallel m & 4. \text{?} \\
   \end{array}
   \]

21. PROOF Write a two-column proof of Theorem 3.6.

22. PROOF Write a paragraph proof of Theorem 3.7.

PROOF Write a two-column proof for each of the following.

23. Given: \(\angle 2 \equiv \angle 1\)
    \(\angle 1 \equiv \angle 3\)
    Prove: \(ST \parallel UV\)

24. Given: \(\overline{JM} \parallel \overline{KN}\)
    \(\angle 1 \equiv \angle 2\)
    \(\angle 3 \equiv \angle 4\)
    Prove: \(KM \parallel LN\)

25. Given: \(\angle RSP \equiv \angle PQR\)
    \(\angle QRS \) and \(\angle PQR\) are supplementary.
    Prove: \(PS \parallel QR\)

26. Given: \(\overline{AD} \perp \overline{CD}\)
    \(\angle 1 \equiv \angle 2\)
    \(\overline{BC} \perp \overline{CD}\)
    Prove: \(AB \parallel CD\)

27. RESEARCH Use the Internet or other resource to find mathematicians like John Playfair who discovered new concepts and proved new theorems related to parallel lines. Briefly describe their discoveries. Include any factors that prompted their research, such as a real-world need or research in a different field.

Source: mathworld.wolfram.com

Brown Brothers
28. **HOME IMPROVEMENT** To build a fence, Jim positioned the fence posts and then placed a 2 × 4 board at an angle between the fence posts. As he placed each picket, he made sure the angle that the picket made with the 2 × 4 was the same as the angle for the rest of the pickets. Why does this ensure that the pickets will be parallel?

29. **FOOTBALL** When striping the practice football field, Mr. Hawkinson first painted the sidelines. Next he marked off 10-yard increments on one sideline. He then constructed lines perpendicular to the sidelines at each 10-yard mark. Why does this guarantee that the 10-yard lines will be parallel?

30. **CRAFTS** Juan is making a stained glass piece. He cut the top and bottom pieces at a 30° angle. If the corners are right angles, explain how Juan knows that each pair of opposite sides is parallel.

31. **FRAMING** Wooden picture frames are often constructed using a miter box or miter saw. These tools allow you to cut at an angle of a given size. If each of the four pieces of framing material is cut at a 45° angle, will the sides of the frame be parallel? Explain your reasoning.

32. **REASONING** Summarize five different methods that can be used to prove that two lines are parallel.

33. **REASONING** Find a counterexample for the following statement.
   *If lines ℓ and m are cut by transversal t so that consecutive interior angles are congruent, then lines ℓ and m are parallel and t is perpendicular to both lines.*

34. **OPEN ENDED** Describe two situations in your own life in which you encounter parallel lines. How could you verify that the lines are parallel?

35. **CHALLENGE** When Adeel was working on an art project, he drew a four-sided figure with two pairs of opposite parallel sides. He noticed some patterns relating to the angles in the figure. List as many patterns as you can about a 4-sided figure with two pairs of opposite parallel sides.

36. **Writing in Math** Use the information about parking lots on page 172 to explain how you know that the sides of a parking space are parallel. Include a comparison of the angles at which the lines forming the edges of a parking space strike the center line, and a description of the type of parking spaces that have sides that form congruent consecutive interior angles.
37. Which of the following facts would be sufficient to prove that line \( \ell \) is parallel to \( \overline{AC} \)?

A \( \angle 1 \cong \angle 3 \)

B \( \angle 3 \cong \angle C \)

C \( \angle 1 \cong \angle C \)

D \( \angle 2 \cong \angle A \)

38. REVIEW
Kendra has at least one quarter, one dime, one nickel, and one penny. If she has three times as many pennies as nickels, the same number of nickels as dimes, and twice as many dimes as quarters, then what is the least amount of money she could have?

F $0.41

Graphing Calculator Lab
Points of Intersection

You can use a TI-83/84 Plus graphing calculator to determine the points of intersection of a transversal and two parallel lines.

EXAMPLE

Parallel lines \( \ell \) and \( m \) are cut by a transversal \( t \). The equations of \( \ell \), \( m \), and \( t \) are \( y = \frac{1}{2}x - 4 \), \( y = \frac{1}{2}x + 6 \), and \( y = -2x + 1 \), respectively. Use a graphing calculator to determine the points of intersection of \( t \) with \( \ell \) and \( m \).

**Step 1** Enter the equations in the \( Y= \) list and graph in the standard viewing window.

**KEYSTROKES:**

- \( Y=0.5 \ X,T,\theta,n \ 4 \ \text{ENTER} \)
- \( 0.5 \ X,T,\theta,n \ + \ 6 \ \text{ENTER} \)

**Step 2** Use the CALC menu to find the points of intersection.

- **Find the intersection of \( \ell \) and \( t \).**
  **KEYSTROKES:** \( \text{2nd CALC 5 ENTER} \)

- **Find the intersection of \( m \) and \( t \).**
  **KEYSTROKES:** \( \text{2nd CALC 5 ENTER} \)

Lines \( \ell \) and \( t \) intersect at \((2, -3)\).

Lines \( m \) and \( t \) intersect at \((-2, 5)\).

**Exercises**

Parallel lines \( a \) and \( b \) are cut by a transversal \( t \). Use a graphing calculator to determine the points of intersection of \( t \) with \( a \) and \( b \). Round to the nearest tenth.

1. \( a: y = 2x - 10 \)
   \( b: y = 2x - 2 \)
   \( t: y = -\frac{1}{2}x + 4 \)

2. \( a: y = -x - 3 \)
   \( b: y = -x + 5 \)
   \( t: y = x - 6 \)

3. \( a: y = 6 \)
   \( b: y = 0 \)
   \( t: x = -2 \)

4. \( a: y = -3x + 1 \)
   \( b: y = -3x - 3 \)
   \( t: y = \frac{1}{3}x + 8 \)

5. \( a: y = \frac{4}{5}x - 2 \)
   \( b: y = \frac{4}{5}x - 7 \)
   \( t: y = -\frac{5}{4}x \)

6. \( a: y = -\frac{1}{6}x + \frac{2}{3} \)
   \( b: y = -\frac{1}{6}x + \frac{5}{12} \)
   \( t: y = 6x + 2 \)
When installing shelves, it is important that the vertical brackets be parallel for the shelves to line up. One technique is to install the first bracket and then use a carpenter’s square to measure and mark two or more points the same distance from the first bracket. You can then align the second bracket with those marks.

Distance from a Point to a Line In Lesson 3-5, you learned that if two lines are perpendicular to the same line, then they are parallel. The carpenter’s square is used to construct a line perpendicular to each bracket. The space between each bracket is measured along the perpendicular segment. This is to ensure that the brackets are parallel. This is an example of using lines and perpendicular segments to determine distance. The shortest segment from a point to a line is the perpendicular segment from the point to the line.

**Example** Distance from a Point to a Line

Draw the segment that represents the distance from $P$ to $\overline{AB}$.

Since the distance from a line to a point not on the line is the length of the segment perpendicular to the line from the point, extend $\overline{AB}$ and draw $\overline{PQ}$ so that $\overline{PQ} \perp \overline{AB}$.
1. Draw the segment that represents the distance from $Q$ to $RS$.

When you draw a perpendicular segment from a point to a line, you can guarantee that it is perpendicular by using the construction of a line perpendicular to a line through a point not on that line.

**EXAMPLE Construct a Perpendicular Segment**

**COORDINATE GEOMETRY** Line $\ell$ contains points $(-6, -9)$ and $(0, -1)$. Construct a line perpendicular to line $\ell$ through $P(-7, -2)$ not on $\ell$. Then find the distance from $P$ to $\ell$.

**Step 1** Graph line $\ell$ and point $P$. Place the compass point at point $P$. Make the setting wide enough so that when an arc is drawn, it intersects $\ell$ in two places. Label these points of intersection $A$ and $B$.

**Step 2** Put the compass at point $A$ and draw an arc below line $\ell$. (Hint: Any compass setting greater than $\frac{1}{2} AB$ will work.)

**Step 3** Using the same compass setting, put the compass at point $B$ and draw an arc to intersect the one drawn in step 2. Label the point of intersection $Q$. 

---

Distance

Note that the distance from a point to the $x$-axis can be determined by looking at the $y$-coordinate and the distance from a point to the $y$-axis can be determined by looking at the $x$-coordinate.
Recall from Lesson 1-1 that a \textit{locus} is the set of all points that satisfy a given condition. Parallel lines can be described as the locus of points in a plane equidistant from a given line.

You will prove Theorem 3.9 in Exercise 19.

\textbf{Step 4} Draw \( \overrightarrow{PQ} \). \( PQ \perp \ell \). Label point \( R \) at the intersection of \( \overrightarrow{PQ} \) and \( \ell \). Use the slopes of \( \overrightarrow{PQ} \) and \( \ell \) to verify that the lines are perpendicular.

The segment constructed from point \( P(-7, -2) \) perpendicular to the line \( \ell \), appears to intersect line \( \ell \) at \( R(-3, -5) \). Use the Distance Formula to find the distance between point \( P \) and line \( \ell \).

\[
\begin{align*}
    d &= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \\
    &= \sqrt{(-7 - (-3))^2 + (-2 - (-5))^2} \\
    &= \sqrt{25} 	ext{ or } 5
\end{align*}
\]

The distance between \( P \) and \( \ell \) is 5 units.

\textbf{CHECK Your Progress}

2. Line \( \ell \) contains points (1, 2) and (5, 4). Construct a line perpendicular to \( \ell \) through \( P(1, 7) \). Then find the distance from \( P \) to \( \ell \).

\textbf{Distance Between Parallel Lines} Two lines in a plane are parallel if they are everywhere equidistant. Equidistant means that the distance between two lines measured along a perpendicular line to the lines is always the same. The distance between parallel lines is the length of the perpendicular segment with endpoints that lie on each of the two lines.

\textbf{KEY CONCEPT} \textit{Distance Between Parallel Lines}

The distance between two parallel lines is the distance between one of the lines and any point on the other line.

Recall from Lesson 1-1 that a \textit{locus} is the set of all points that satisfy a given condition. Parallel lines can be described as the locus of points in a plane equidistant from a given line.

\textbf{THEOREM 3.9}

In a plane, if two lines are equidistant from a third line, then the two lines are parallel to each other.

You will prove Theorem 3.9 in Exercise 19.
Find the distance between the parallel lines \( \ell \) and \( n \) with equations 
\[ y = -\frac{1}{3}x - 3 \quad \text{and} \quad y = -\frac{1}{3}x + \frac{1}{3} \] respectively.

You will need to solve a system of equations to find the endpoints of a segment that is perpendicular to both \( \ell \) and \( n \). The slope of lines \( \ell \) and \( n \) is \(-\frac{1}{3}\).

• First, write an equation of a line \( p \) perpendicular to \( \ell \) and \( n \). The slope of \( p \) is the opposite reciprocal of \(-\frac{1}{3} \), or 3. Use the \( y \)-intercept of line \( \ell \), \((0, -3)\), as one of the endpoints of the perpendicular segment.

\[
y - y_1 = m(x - x_1) \quad \text{Point-slope form}
\]
\[
y - (-3) = 3(x - 0) \quad x_1 = 0, y_1 = -3, m = 3
\]
\[
y + 3 = 3x \quad \text{Simplify.}
\]
\[
y = 3x - 3 \quad \text{Subtract 3 from each side.}
\]

• Next, use a system of equations to determine the point of intersection of lines \( n \) and \( p \).

\[
n: y = -\frac{1}{3}x + \frac{1}{3} \quad \frac{-1}{3}x + \frac{1}{3} = 3x - 3
\]
\[
p: y = 3x - 3
\]
\[
\frac{-1}{3}x - 3x = -3 - \frac{1}{3}
\]
\[
\frac{-10}{3}x = -\frac{10}{3}
\]
\[
x = 1
\]

Solve for \( y \). 
Substitute 1 for \( x \) in the equation for \( p \).

\[
y = 3(1) - 3 \quad \text{Simplify.}
\]
\[
y = 0
\]

The point of intersection is \((1, 0)\).

• Then, use the Distance Formula to determine the distance between \((0, -3)\) and \((1, 0)\).

\[
d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \quad \text{Distance Formula}
\]
\[
d = \sqrt{(0 - 1)^2 + (-3 - 0)^2} \quad x_2 = 0, x_1 = 1, y_2 = -3, y_1 = 0
\]
\[
d = \sqrt{10} \quad \text{Simplify.}
\]

The distance between the lines is \(\sqrt{10}\) or about 3.16 units.

3. Find the distance between parallel lines \( a \) and \( b \) with equations 
\[ x + 3y = 6 \quad \text{and} \quad x + 3y = -14 \] respectively.
1. Copy the figure. Draw the segment that represents the distance $D$ to $AE$. 

2. **UTILITIES** Housing developers often locate the shortest distance from a house to the water main so that a minimum of pipe is required to connect the house to the water supply. Copy the diagram, and draw a possible location for the pipe.

3. **COORDINATE GEOMETRY** Line $\ell$ contains points $(0, 0)$ and $(2, 4)$. Draw line $\ell$. Construct a line perpendicular to $\ell$ through $A(2, -6)$. Then find the distance from $A$ to $\ell$.

4. Find the distance between the pair of parallel lines with the given equations.
   
   $y = \frac{3}{4}x - 1$
   
   $y = \frac{3}{4}x + \frac{1}{8}$

5. Copy each figure. Draw the segment that represents the distance indicated.

   **COORDINATE GEOMETRY** Construct a line perpendicular to $\ell$ through $P$. Then find the distance from $P$ to $\ell$.

   8. Line $\ell$ contains points $(-3, 0)$ and $(3, 0)$. Point $P$ has coordinates $(4, 3)$.
   
   9. Line $\ell$ contains points $(0, -2)$ and $(1, 3)$. Point $P$ has coordinates $(-4, 4)$.

   Find the distance between each pair of parallel lines with the given equations.

   10. $y = -3$
       $y = 1$
   
   11. $x = 4$
       $x = -2$
   
   12. $y = 2x + 2$
       $y = 2x - 3$
   
   13. $y = \frac{3}{5}x - 3$
       $y = \frac{3}{5}x + 2$
   
   14. $x = 8.5$
       $x = -12.5$
   
   15. $y = 15$
       $y = -4$
Find the distance between each pair of parallel lines with the given equations.

16. \( y = 4x \quad 17. \ y = 2x - 3 \quad 18. \ y = -\frac{3}{4}x - 1 \)
   \[ y = 4x - 17 \quad 2x - y = -4 \quad 3x + 4y = 20 \]

19. **PROOF** Write a paragraph proof of Theorem 3.9.

Graph each line. Construct a perpendicular segment through the given point. Then find the distance from the point to the line.

20. \( y = 5, (-2, 4) \quad 21. \ y = 2x + 2, (-1, -5) \quad 22. \ 2x - 3y = -9, (2, 0) \)

23. **CONSTRUCTION** When framing a wall during a construction project, carpenters often use a plumb line. A **plumb line** is a string with a weight called a **plumb bob** attached on one end. The plumb line is suspended from a point and then used to ensure that wall studs are vertical. How does the plumb line help to find the distance from a point to the floor?

**CONSTRUCTIONS** Line \( \ell \) contains points \((-4, 3)\) and \((2, -3)\). Point \( P \) at \((-2, 1)\) is on line \( \ell \). Complete the following construction.

- **Step 1** Graph line \( \ell \) and point \( P \), and put the compass at point \( P \). Using the same compass setting, draw arcs to the left and right of \( P \). Label these points \( A \) and \( B \).
- **Step 2** Open the compass to a setting greater than \( AP \). Put the compass at point \( A \) and draw an arc above line \( \ell \).
- **Step 3** Using the same compass setting, put the compass at point \( B \) and draw an arc above line \( \ell \). Label the point of intersection \( Q \). Then draw \( PQ \).

24. What is the relationship between line \( \ell \) and \( PQ \)? Verify your conjecture using the slopes of the two lines.

25. Repeat the construction above using a different line and point on that line.

26. **REASONING** Compare and contrast three different methods that you can use to show that two lines in a plane are parallel.

**CHALLENGE** For Exercises 27–32, draw a diagram that represents each description.

- 27. Point \( P \) is equidistant from two parallel lines.
- 28. Point \( P \) is equidistant from two intersecting lines.
- 29. Point \( P \) is equidistant from two parallel planes.
- 30. Point \( P \) is equidistant from two intersecting planes.
- 31. A line is equidistant from two parallel planes.
- 32. A plane is equidistant from two other planes that are parallel.
33. **Writing in Math** Refer to the information about shelving on page 181 to explain how the distance between parallel lines relates to hanging new shelves. Include an explanation of why marking several points equidistant from the first bracket will ensure that the brackets are parallel, and a description of other types of home improvement projects that require that two or more elements are parallel.

34. Segment $AB$ is perpendicular to segment $BD$. Segment $AB$ and segment $CD$ bisect each other at point $X$. If $AB = 16$ and $CD = 20$, what is the measure of $\overline{BD}$?

A  6  
B  8  
C  10  
D  18

35. **REVIEW** Pablo bought a sweater on sale for 25% off the original price and another 40% off the discounted price. If the sweater originally cost $48, what was the final sale price of the sweater?

F  $14.40  
G  $21.60  
H  $31.20  
J  $36.00

Given the following information, determine which lines, if any, are parallel. State the postulate or theorem that justifies your answer.  \(\text{Lesson 3-5}\)

36. $\angle 5 \cong \angle 6$

37. $\angle 6 \cong \angle 2$

38. $\angle 1$ and $\angle 2$ are supplementary.

Write an equation in slope-intercept form for each line.  \(\text{Lesson 3-4}\)

39. $a$

40. $b$

41. $c$

42. perpendicular to line $a$, contains $(-1, -4)$

43. parallel to line $c$, contains $(2, 5)$

44. **COMPUTERS** In 1999, 73% of American teenagers used the Internet. Five years later, this increased to 87%. If the rate of change is constant, estimate when 100% of American teenagers will use the Internet.  \(\text{Lesson 3-3}\)

**Cross-Curricular Project**

**Geometry and Earth Science**

**How’s the Weather?** It’s time to complete your project. Use the information and data you have gathered about climate and locations on Earth to prepare a portfolio or Web page. Be sure to include graphs and/or tables in the presentation.

Cross-Curricular Project at geometryonline.com
So far in this text, we have studied **plane Euclidean geometry**, which is based on a system of points, lines, and planes. **Spherical geometry** is a system of points, great circles (lines), and spheres (planes). Spherical geometry is one type of **non-Euclidean geometry**. Much of spherical geometry was developed by early Babylonians, Arabs, and Greeks. Their study was based on the astronomy of Earth and their need to be able to measure time accurately.

### Plane Euclidean Geometry

- A line segment is the shortest path between two points.
- There is a unique line passing through any two points.
- A line goes on infinitely in two directions.
- If three points are collinear, exactly one is between the other two.

![Plane Euclidean Geometry Diagram](image)

Plane $P$ contains line $\ell$ and point $A$ not on $\ell$.

### Spherical Geometry

- An arc of a great circle is the shortest path between two points.
- There is a unique great circle passing through any pair of non-polar points.
- A great circle is finite and returns to its original starting point.
- If three points are collinear, any one of the three points is between the other two.

![Spherical Geometry Diagram](image)

Sphere $\mathcal{E}$ contains great circle $m$ and point $P$ not on $m$. $m$ is a line on sphere $\mathcal{E}$.

Polar points are endpoints of a diameter of a great circle.

The table below compares and contrasts **lines** in the system of plane Euclidean geometry and **lines** (great circles) in spherical geometry.

<table>

- $A$ is between $B$ and $C$.
- $B$ is between $A$ and $C$.
- $C$ is between $A$ and $B$.

In spherical geometry, Euclid’s first four postulates and their related theorems hold true. However, theorems that depend on the parallel postulate (Postulate 5) may not be true.

In Euclidean geometry, parallel lines lie in the same plane and never intersect. In spherical geometry, the sphere is the plane, and a great circle represents a line. Every great circle containing $A$ intersects $\ell$. Thus, there exists no line through point $A$ that is parallel to $\ell$. 

---

188 Chapter 3 Parallel and Perpendicular Lines
Every great circle of a sphere intersects all other great circles on that sphere in exactly two points. In the figure at the right, one possible line through point $A$ intersects line $\ell$ at $P$ and $Q$.

If two great circles divide a sphere into four congruent regions, the lines are perpendicular to each other at their intersection points. Each longitude circle on Earth intersects the equator at right angles.

**EXAMPLE**

*Compare Plane and Spherical Geometries*

*For each property listed from plane Euclidean geometry, write a corresponding statement for spherical geometry.*

**a.** Perpendicular lines intersect at one point.

**b.** Perpendicular lines form four right angles.

Perpendicular great circles intersect at two points.

Perpendicular great circles form eight right angles.

**EXERCISES**

*For each property from plane Euclidean geometry, write a corresponding statement for spherical geometry.*

1. A line goes on infinitely in two directions.
2. A line segment is the shortest path between two points.
3. Two distinct lines with no point of intersection are parallel.
4. Parallel lines have infinitely many common perpendicular lines.

If spherical points are restricted to be nonpolar points, determine if each statement from plane Euclidean geometry is also true in spherical geometry. If false, explain your reasoning.

5. Any two distinct points determine exactly one line.
6. If three points are collinear, exactly one point is between the other two.
7. Given line $\ell$ and point $P$ not on $\ell$, there exists exactly one line parallel to $\ell$ passing through $P$. 
Necessary and Sufficient Conditions

We all know that water is a necessary condition for fish to survive. However, it is not a sufficient condition. For example, fish also need food to survive.

Necessary and sufficient conditions are important in mathematics. Consider the property of having four sides. While having four sides is a necessary condition for something being a square, that single condition is not, by itself, a sufficient condition to guarantee that it is a square. Trapezoids are four-sided shapes that are not squares.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Definition</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>necessary</td>
<td>A condition A is said to be necessary for a condition B, if and only if the falsity or nonexistence of A guarantees the falsity or nonexistence of B.</td>
<td>Having opposite sides parallel is a necessary condition for something being a square.</td>
</tr>
<tr>
<td>sufficient</td>
<td>A condition A is said to be sufficient for a condition B, if and only if the truth or existence of A guarantees the truth or existence of B.</td>
<td>Being a square is a sufficient condition for something being a rectangle.</td>
</tr>
</tbody>
</table>

Reading to Learn

Determine whether each statement is true or false. If false, give a counterexample.

1. Being a square is a necessary condition for being a rectangle.
2. Being a rectangle is a necessary condition for being a square.
3. Being greater than 15 is a necessary condition for being less than 20.
4. Being less than 12 is a sufficient condition for being less than 20.
5. Walking on two legs is a sufficient condition for being a human being.
6. Breathing air is a necessary condition for being a human being.
7. Being an equilateral rectangle is both a necessary and sufficient condition for being a square.

Determine whether I is a necessary condition for II, a sufficient condition for II, or both. Explain.

8. I. Two points are given.
   II. An equation of a line can be written.
9. I. Two planes are parallel.
   II. Two planes do not intersect.
10. I. Two angles are congruent.
    II. Two angles are alternate interior angles.
Vocabulary Check
Refer to the figure and choose the term that best completes each sentence.

1. Angles 4 and 5 are (consecutive, alternate) interior angles.
2. The distance from point A to line n is the length of the segment (perpendicular, parallel) to line n through A.
3. If ∠4 and ∠6 are supplementary, lines m and n are said to be (parallel, intersecting) lines.
4. Line ℓ is a (slope-intercept, transversal) for lines n and m.
5. ∠1 and ∠8 are (alternate interior, alternate exterior) angles.
6. If n || m, ∠6 and ∠3 are (supplementary, congruent).
7. Angles 5 and 3 are (consecutive, alternate) interior angles.
8. If ∠2 ∼ ∠7, then lines n and m are (skew, parallel) lines.
Lesson-by-Lesson Review

3-1 Parallel Lines and Transversals (pp. 142–147)

Identify each pair of angles as alternate interior, alternate exterior, corresponding, or consecutive interior angles.

9. \( \angle 3 \) and \( \angle 6 \)
10. \( \angle 5 \) and \( \angle 3 \)
11. \( \angle 2 \) and \( \angle 7 \)
12. \( \angle 4 \) and \( \angle 8 \)

13. **EAGLES** The flight paths of two American bald eagles were tracked at an altitude of 8500 feet in a direction north to south and an altitude of 12,000 feet in a direction west to east, respectively. Describe the types of lines formed by the paths of these two eagles. Explain your reasoning.

Example 1

Identify each pair of angles as alternate interior, alternate exterior, corresponding, or consecutive interior angles.

1. \( \angle 7 \) and \( \angle 3 \)  
2. \( \angle 4 \) and \( \angle 6 \)  
3. \( \angle 7 \) and \( \angle 2 \)  
4. \( \angle 3 \) and \( \angle 6 \)

Example 2

If \( m \angle 1 = 4p + 15 \), and \( m \angle 3 = 3p - 10 \), find \( p \).

Since \( \overrightarrow{AC} \parallel \overrightarrow{BD} \), \( \angle 1 \) and \( \angle 3 \) are supplementary by the Consecutive Interior Angles Theorem.

\[
m \angle 1 + m \angle 3 = 180 \quad \text{Def. of suppl. \( \angle \)}
\]

\[
(4p + 15) + (3p - 10) = 180 \quad \text{Substitution}
\]

\[
7p + 5 = 180 \quad \text{Simplify.}
\]

\[
7p = 175 \quad \text{Subtract.}
\]

\[
p = 25 \quad \text{Divide.}
\]

3-2 Angles and Parallel Lines (pp. 149–154)

14. If \( m \angle 1 = 3a + 40 \), \( m \angle 2 = 2a + 25 \), and \( m \angle 3 = 5b - 26 \), find \( a \) and \( b \).

15. **BOATING** To cross the river safely, Georgia angles her canoe \( 65^\circ \) from the river’s edge, as shown. At what angle \( x \) will she arrive on the other side of the river?
Slopes of Lines (pp. 156–163)

Graph the line that satisfies each condition.
16. contains (2, 3) and is parallel to \( \overrightarrow{AB} \) with \( A(-1, 2) \) and \( B(1, 6) \)
17. contains \((-2, -2)\) and is perpendicular to \( \overrightarrow{PQ} \) with \( P(5, 2) \) and \( Q(3, -4) \)

18. **PAINTBALL** During a game of paintball, Trevor and Carlos took different paths. If the field can be mapped on the coordinate plane, Trevor ran from \((-5, -3)\) to \((4, 3)\) and Carlos from \((2, -7)\) to \((-6, 5)\). Determine whether their paths are parallel, perpendicular, or neither.

Example 3 Graph the line that contains \( W(-2, 3) \) and is parallel to \( \overrightarrow{XY} \) with \( X(3, -4) \) and \( Y(5, 6) \).

The slope of \( \overrightarrow{XY} \) is \( \frac{6 - (-4)}{5 - 3} = \frac{10}{2} = 5 \)

The slope of the line parallel to \( \overrightarrow{XY} \) through \( W(-2, 3) \) is also 5, since parallel lines have the same slope.

Graph the line.
Start at \((-2, 3)\).
Move up 5 units and then move right 1 unit. Label the point \( Z \).
Draw \( \overrightarrow{WZ} \).

Equations of Lines (pp. 165–170)

Write an equation in the indicated form of the line that satisfies the given conditions.
19. \( m = 2 \); contains \((1, -5)\); point-slope
20. \( m = -\frac{3}{2} \); contains \((2, -4)\); slope-intercept
21. contains \((-3, -7)\) and \((9, 1)\); point-slope
22. contains \((2, 5)\) and \((-2, -1)\); slope-intercept

23. **DRIVING** A car traveling at 30 meters per second begins to slow down or decelerate at a constant rate. After 2 seconds, its velocity is 16 meters per second. Write an equation that represents the car’s velocity \( v \) after \( t \) seconds. Then use this equation to determine how long it will take the car to come to a complete stop.

Example 4 Write an equation in slope-intercept form of the line that passes through \((2, -4)\) and \((-3, 1)\).

Find the slope of the line.
\[
m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{1 - (-4)}{-3 - 2} = \frac{5}{-5} = -1
\]

Simplify.

Now use the point-slope form and either point to write an equation.
\[
y - y_1 = m(x - x_1)
\]

\[
y - (-4) = -1(x - 2) \quad m = -1, \quad (x_1, y_1) = (2, -4)
\]

\[
y + 4 = -x + 2
\]

Simplify.

\[
y = -x - 2
\]

Subtract 4 from each side.
3-5 Proving Lines Parallel (pp. 172–179)

Refer to the figure at the right. Determine which lines, if any, are parallel given the following information. State the postulate or theorem that justifies your answer.
24. \( \angle GHL \cong \angle EJK \)
25. \( m\angle ADJ + m\angle DJE = 180 \)
26. OPTICAL ILLUSION Explain how you could use a protractor to prove that the lines in the optical illusion are parallel.

Example 5 Given that \( \angle GHL \cong \angle ADE \), determine which lines, if any, are parallel.

\[ \angle GHL \text{ and } \angle ADE \text{ are alternate exterior angles for } \overrightarrow{GK} \text{ and } \overrightarrow{CF}. \]
Since the angles are congruent, \( \overrightarrow{GK} \) and \( \overrightarrow{CF} \) are parallel by the Alternate Exterior Angles Theorem.

3-6 Perpendiculars and Distance (pp. 181–187)

Copy each figure. Draw the segment that represents the distance indicated.
27. \( M \) to \( \overrightarrow{RS} \)  
28. \( T \) to \( \overrightarrow{XY} \)
29. NEBRASKA The northern and southern boundaries of the Nebraska Panhandle can be represented by lines with the equations \( y = 90 \) and \( y = -48 \). Find the approximate distance across the panhandle if the units on the map are measured in miles.

Example 6 Copy the figure. Draw the segment that represents the distance from \( Y \) to \( \overrightarrow{WX} \).

The distance from a line to a point not on the line is the length of the segment perpendicular to the line that passes through the point.

Extend \( \overrightarrow{WX} \) and draw the segment perpendicular to \( \overrightarrow{WX} \) from \( Y \).
1. **MULTIPLE CHOICE** The diagram shows the two posts on which seats are placed and several crossbars.

Which term best describes \( \angle 6 \) and \( \angle 5 \)?
A. alternate exterior angles
B. alternate interior angles
C. consecutive interior angles
D. corresponding angles

In the figure, \( m \angle 12 = 64 \). Find the measure of each angle.

2. \( \angle 8 \)
3. \( \angle 13 \)
4. \( \angle 7 \)
5. \( \angle 11 \)
6. \( \angle 3 \)
7. \( \angle 4 \)
8. \( \angle 9 \)
9. \( \angle 5 \)
10. \( \angle 16 \)
11. \( \angle 14 \)

Graph the line that satisfies each condition.
12. slope = \(-1\), contains \( P(-2, 1) \)
13. contains \( Q(-1, 3) \) and is perpendicular to \( \overline{AB} \) with \( A(-2, 0) \) and \( B(4, 3) \)
14. contains \( M(1, -1) \) and is parallel to \( \overrightarrow{FG} \) with \( F(3, 5) \) and \( G(-3, -1) \)
15. slope = \(-\frac{4}{3}\), contains \( K(3, -2) \)

16. **MULTIPLE CHOICE** In the figure below, which can not be true if \( m \parallel \ell \) and \( m \angle 1 = 73 \)°?

F. \( m \angle 4 > 73 \)°
G. \( \angle 1 \equiv \angle 4 \)
H. \( m \angle 2 + m \angle 3 = 180 \)°
J. \( \angle 3 \equiv \angle 1 \)

For Exercises 17–22, refer to the figure below. Find each value if \( p \parallel q \).

17. \( x \)
18. \( y \)
19. \( m \angle FCE \)
20. \( m \angle ABD \)
21. \( m \angle BCE \)
22. \( m \angle CBD \)

Find the distance between each pair of parallel lines.
23. \( y = 2x - 1, y = 2x + 9 \)
24. \( y = -x + 4, y = -x - 2 \)

25. **COORDINATE GEOMETRY** Detroit Road starts in the center of the city, and Lorain Road starts 4 miles west of the center of the city. Both roads run southeast. If these roads are put on a coordinate plane with the center of the city at \((0, 0)\), Lorain Road is represented by the equation \( y = -x - 4 \) and Detroit Road is represented by the equation \( y = -x \). How far away is Lorain Road from Detroit Road?
Read each question. Then fill in the correct answer on the answer document provided by your teacher or on a sheet of paper.

1. In the figure below, $\angle 3 \equiv \angle 8$.

Which of the following conclusions does not have to be true?
A $\angle 4 \equiv \angle 8$
B $\angle 4$ and $\angle 7$ are supplementary angles.
C Line $l$ is parallel to line $m$.
D $\angle 5$ and $\angle 6$ are supplementary angles.

2. In the diagram below of a mailbox post, which term describes $\angle 1$ and $\angle 2$?
F alternate exterior angles
G alternate interior angles
H consecutive interior angles
J corresponding angles

3. ALGEBRA Which problem situation can not be described by a linear function?
A The distance traveled at an average speed of 70 miles per hour for $h$ hours.
B The area of an isosceles right triangle given the length of one leg.
C The amount of sales tax on a purchase if the rate is 6.5%.
D The gross weekly salary earned at an hourly rate of $5.85 for $t$ hours.

4. In the accompanying diagram, parallel lines $l$ and $m$ are cut by transversal $t$.

Which statement about angles 1 and 4 must be true?
F $\angle 1 \equiv \angle 4$
G $\angle 1$ is the complement of $\angle 4$.
H $\angle 1$ is the supplement of $\angle 4$.
J $\angle 1$ and $\angle 4$ are acute angles.

5. What statement is needed in Step 2 to complete this proof?

Given: $\frac{4x - 6}{3} = 10$
Prove: $x = 9$

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. $\frac{4x - 6}{3} = 10$</td>
<td>1. Given</td>
</tr>
<tr>
<td>3. $4x - 6 = 30$</td>
<td>3. Simplify.</td>
</tr>
<tr>
<td>4. $4x = 36$</td>
<td>4. Addition Prop.</td>
</tr>
<tr>
<td>5. $x = 9$</td>
<td>5. Division Prop.</td>
</tr>
</tbody>
</table>

A $3\left(\frac{4x - 6}{3}\right) = 10$
B $\frac{4x - 6}{3} = 3(10)$
C $3\left(\frac{4x - 6}{3}\right) = 3(10)$
D $4x - 6 = 30$

6. GRIDDABLE Point $E$ is the midpoint of $DF$. If $DE = 8x - 3$ and $EF = 3x + 7$, what is $x$?
7. If \( \angle ABC \cong \angle CBD \), which statement *must* be true?

F \( \overline{BC} \) bisects \( \angle ABD \).
G \( \angle ABD \) is a right angle.
H \( \angle ABC \) and \( \angle CBD \) are supplementary.
J \( \overline{AB} \) and \( \overline{BD} \) are perpendicular.

8. **ALGEBRA** Which expression is equivalent to \( 4y^3 \cdot 8y^{-5} \)?

A \( 32y^8 \)  
B \( 32y^{-2} \)  
C \( 32y^{-8} \)  
D \( 32y^{-15} \)

9. Based strictly on this diagram, which is a valid conclusion?

F No dog owners also own cats.
G No bird owners also own dogs.
H No cat owners also own birds.
J No pet owners own more than one pet.

**TEST-TAKING TIP** Question 9 Remember that overlapping regions in a Venn diagram represent common or shared elements between sets.

10. Which of the following describes the line containing the points (2, 4) and (0, –2)?

A \( y = \frac{1}{3}x - 4 \)  
B \( y = -3x + 2 \)  
C \( y = \frac{1}{3}x - 2 \)  
D \( y = 3x - 2 \)

11. Which property could justify the first step in solving \( 3 \times \frac{14x + 6}{8} = 18 \)?

F Addition Property of Equality  
G Division Property of Equality  
H Substitution Property of Equality  
J Transitive Property of Equality

12. If line \( \ell \) is parallel to line \( m \), which best describes the construction below?

A a line perpendicular to lines \( \ell \) and \( m \)  
B a line parallel to lines \( \ell \) and \( m \)  
C a line intersecting line \( \ell \)  
D a line congruent to line \( m \)

**Pre-AP**

Record your answer on a sheet of paper. Show your work.

13. To get a player out who was running from third base to home, Kahlil threw the ball a distance of 120 feet, from second base toward home plate. Did the ball reach home plate? If not, how far from the plate did it land? Explain and show your calculations to justify your answer.
